

SE4041 – Mobile Application Design and Development

Assignment 01 – UI Prototype Submission

Community Services and Local Marketplace Mobile Application

Brand wordmark: နေရာway | Help nearby. Trade nearby. Trust nearby.

Figma prototype: <https://www.figma.com/design/0UVq1JYisRj6rl7UoadYFi/Untitled>

1. Introduction

This document submits the Figma UI prototype for යාලුway (Yaluway), designed under the assigned domain Community Services and Local Marketplace. The prototype covers ideation, the 60-30-10 colour rule, main interface design, and aesthetics and usability, matching the SE4041 marking scheme.

යාලුway is a hyperlocal neighbourhood notice-board app. People nearby can post three kinds of things in one place: community Help, local Services, and Marketplace goods (sell, donate, or borrow). The UI is designed as one listing app with three post types, not three separate products.

1.1 Purpose of this submission

- Present the complete Figma prototype screens with labelled explanations.
- Show how ideation is translated into interface structure and visual identity.
- Demonstrate consistent 60-30-10 colour application across all screens.
- Explain usability choices that support the later Kotlin / Room implementation.
-

1.2 Prototype overview

The prototype contains 15 mobile frames (iPhone 14 / 390 × 844) plus a Design system page. Screens are linked in Figma Prototype so the flow can be clicked from Splash to Profile.

Figure 1. Complete Figma UI prototype (all screens on one canvas).

2. Ideation

Ideation marks assess whether the idea is innovative, fits the assigned domain, and clearly addresses user needs. The UI is the visual proof of that idea.

2.1 Problem the interface solves

In Sri Lanka, neighbourhood help and local trade still happen on WhatsApp groups and Facebook Marketplace. Those channels are noisy, hard to search, weak on trust, and not designed for both community service and local commerce together. යාලුway's interface puts Help, Services, and Marketplace in one structured mobile path.

2.2 Brand meaning used in the UI

Yalu (යාලු / friend) + Way (path) means a friendly local path to get help, offer services, and trade nearby. Tagline: Help nearby. Trade nearby. Trust nearby.

- Yellow in the wordmark stands for friendship and warmth (යාලු).
- Blue in the wordmark stands for trust and direction (way).
- Handshake / pin icon represents two neighbours meeting on a local path.

2.3 How ideation appears in the screens

UI decision	Why it supports the idea
Home chips: Help Services Marketplace	Shows the 3-in-1 model immediately.
Onboarding in three slides	Teaches the three modules before first use.
Borrow / Donate / Sell chips	Goes beyond classified ads; supports neighbour culture.
Area label (Nugegoda / Hostel A)	Hyperlocal, not island-wide anonymous listings.
Trust score on Profile	Neighbour trust is a core differentiator.
No payment or chat screens	MVP stays academic and buildable in Kotlin + Room.

2.4 Target users reflected in content

Screen copy uses Sri Lankan neighbourhood examples so the panel can see the audience: students (textbooks, kettle, maths tutor), residents (plumber, blood request), and home providers (baker, cleaner). Persona Nimali Perera appears on Profile and post-detail.

3. Application of the 60-30-10 Colour Rule

The 60-30-10 rule controls how much of the screen each colour occupies. It is not three colours mixed equally. 60% is the dominant canvas, 30% is the primary brand/action colour, and 10% is a small accent used for attention.

3.1 Colour palette

Figure 2. Design system / 60-30-10 palette used in the prototype.

Share	Role	Hex	Where it is used
60%	Background	#F7F8FA	Screen canvas on every frame
30%	Primary (Way blue)	#2F6FED	Buttons, selected chips, links, “way”
10%	Accent (Yalu yellow)	#F5C518	FAB +, Borrow badge,  wordmark
Support	Text navy	#1F2A44	Headings and body text
Support	Card white	#FFFFFF	Cards, input fields
Support	Success teal	#2BBBAD	Success / available states

3.2 How the rule is applied on a typical screen

Example — Home:

- 60%: large off-white background around header, chips, and cards.
- 30%: selected chip, primary actions, and blue brand elements.
- 10%: yellow + FAB and yellow BORROW badge. Small area, high noticeability.

The same split is repeated on Login (blue Log in button, yellow Create account link), Marketplace (blue title/actions, yellow selected Borrow chip), and post-detail (blue Send request, yellow BORROW · FREE pill). Yellow is never used as a second background. If yellow covered half the screen, the 10% rule would break.

3.3 Consistency check

Colour styles named Yaluway/Background, Yaluway/Primary Blue, Yaluway/Accent Yellow, Yaluway/Text Navy, Yaluway/Success Teal, and Yaluway/Cards were created in Figma so every screen uses the same tokens.

4. Information Architecture and User Flow

Navigation is kept simple so the same pattern can be coded later with Activities / Fragments and a bottom bar.

Stage	Screens	User goal
Entry	Splash → Login / Register	Recognise brand and sign in
Learn	Onboarding Help → Services → Marketplace	Understand the 3 modules
Discover	Home, Help board, Services, Marketplace	Browse nearby posts
Act	Post detail, Create post	Request help or publish a listing
Manage	My posts, Empty state, Profile	See own activity and account

Prototype click path used for demonstration:

Splash → Login → Home. New user: Login Create account → Register → Onboarding Help → Onboarding Services → Onboarding Marketplace → Home. From Home: chips open Help / Services / Marketplace; a card opens Post detail; yellow + opens Create post; bottom nav opens My posts or Profile.

5. Main Interface Design

This section presents each screen with a screenshot and a short explanation of purpose, layout, and usability. Screens are grouped by user journey.

5.1 Splash, Login and Register

Splash introduces the brand without clutter. Login is the launcher for returning users. Register collects only what the MVP needs: name, email, password, confirm password, and area (example: Nugegoda) is required because discovery is neighbourhood-first.

Figure 3. Splash (left) and Login (right).

Confirm your password

Area
Nugegoda

Use your neighborhood or hostel area

Create account

Figure 4. Register — Create account.

- Primary action is always a full-width blue button (30% colour).
- Create account on Login is yellow so it is visible without competing with Log in.
- No bottom navigation on these screens — the user is not inside the app yet.

5.2 Onboarding (Help, Services, Marketplace)

Three slides teach the 3-in-1 model before Home. Pagination dots show progress. Get started on the last slide enters the app. Illustrations use the same yellow-blue language as the logo so brand recognition starts before login content appears.

Figure 5. Onboarding 1 — Help nearby (left). Onboarding 2 — Find local services (right).

Figure 6. Onboarding 3 — Trade nearby, with Get started.

5.3 Home — main dashboard

Home is the main interface. It answers: where am I, what can I do, and what is nearby. Location (Nugegoda), search, three module chips, a mixed recent-posts feed, yellow FAB, and bottom navigation (Home | My posts | Me) are all on one screen.

Figure 7. Home feed with Help / Services / Marketplace chips and yellow FAB.

- Chips filter the same list pattern — not three different apps.
- Card badges (HELP / SERVICE / BORROW) make post type scannable.
- FAB is yellow (10%) so “create” is always findable without a fifth nav item.

5.4 Help board

Help board is for urgent neighbourhood needs: blood requests, groceries for elders, volunteer tasks. A banner illustration sets the community-care tone. Filter chips (All, Urgent, Volunteer, Blood) reduce noise compared with a WhatsApp group.

Figure 8. Community Help board.

5.5 Services directory

Services lists local skills: tutors, plumbers, cleaners, home cooks. Category cards with simple icons are faster than reading long classified ads. This screen covers the “community services” half of Topic 8 together with Help board.

Figure 9. Local services directory.

5.6 Marketplace

Marketplace uses a two-column grid because users compare goods visually. Sell / Donate / Borrow chips are the key differentiator from ikman-style ads. Borrow selected in yellow shows the 10% accent used for a meaningful mode, not decoration.

Figure 10. Marketplace grid with Sell / Donate / Borrow.

5.7 Post detail and Create post

Post detail shows one listing in full: hero image, type badge, title, area, poster, status, description, rating, Send request, and Save. Create post reuses one form for all three modules. Type (Help / Services / Marketplace) and Mode (Sell / Donate / Borrow) are chips, so the Kotlin app can store one Post table with type fields.

Figure 11. Post detail (left) and Create post (right).

5.8 Empty state, My posts and Profile

Empty state is shown when My posts has no data — important for first-time users and for usability marks. The filled My posts list shows the user's own listings. Profile holds identity, area, trust score, stats (posts / saved / rating), and account actions including Logout.

Figure 12. Empty state (left) and Profile (right).

6. Design Aesthetics and Usability

6.1 Visual aesthetics

- Flat Material-like UI: no heavy shadows, no gradients, no extra purple.
- Consistent 12 px rounded cards and 48 px primary buttons for a professional look.
- Illustrations share one style (blue + yellow neighbourhood scenes) so screens feel like one product.
- Typography hierarchy: large navy titles, smaller body, caption metadata in muted grey.
- Plenty of whitespace (60% background) so the UI does not feel crowded like social feeds.

6.2 Usability decisions

Principle	How the prototype applies it
Clarity	One primary button per screen; labels are verbs (Log in, Publish, Send request).
Consistency	Same header, FAB, and bottom nav pattern on all in-app screens.
Feedback	Selected chips change fill colour; empty state explains what to do next.
Error prevention	Register has Confirm password; Create post uses chips instead of free typing for type.
Learnability	Onboarding + Home chips teach the three modules in under a minute.
Accessibility	Navy text on off-white; large tap targets; high contrast blue buttons.
Efficiency	FAB is always available to create a post without opening a menu.
Local context	Area fields (Nugegoda, Hostel A) keep tasks neighbourhood-sized.

6.3 What was deliberately left out

Chat, payments, live maps, and AI matching are out of scope for the academic MVP. Hiding them from the prototype keeps the interface honest and matches the Kotlin + Room build plan. Users arrange pickup using profile contact outside the app.

7. Reusable Components (Design System)

A Design system page in Figma holds colour styles and components so screens stay consistent and later Android XML / Compose can map 1:1.

Component	Variants / use
Primary button	Filled #2F6FED, white text — Log in, Publish, Next
Outline button	Blue border — Save, secondary actions
Input field	Rounded, labelled — email, password, title, area
Chip	Unselected outline / selected fill — filters and modes
Post card	White card, badge, title, metadata
Bottom navigation	Home, My posts, Me with selected state
FAB	Yellow circle + — Create post

8. Interactive Prototype

Figma Prototype connections let the panel click through the app. Starting point is Splash.

From	Control	Goes to
Splash	Tap screen	Login
Login	Log in	Home
Login	Create account	Register
Register	Create account	Onboarding Help
Onboarding Help	Next	Onboarding Services
Onboarding Services	Next	Onboarding Marketplace
Onboarding Marketplace	Get started	Home
Home	Help / Services / Marketplace chips	Matching board
Home	Post card	Post detail
Any in-app screen	Yellow + FAB	Create post
Create post	Publish post	Home
Empty state	Create first post	Create post
Bottom nav	My posts / Me	My posts or Profile
Post detail	Back	Home

Play the prototype in Figma: open the file → Prototype tab → Play (present). Link:

9. Mapping to the Marking Scheme

Criterion	Max	Evidence in this prototype
Ideation	3	3-in-1 hyperlocal Help + Services + Marketplace; brand colourway; Sri Lankan neighbourhood scenarios.
60-30-10 colour rule	2	Off-white 60 / blue 30 / yellow 10 applied on every screen;

		documented in Section 3.
Main interface design	3	15 frames covering auth, onboarding, home, 3 boards, detail, create, empty, my posts, profile.
Aesthetics and usability	2	Consistent components, clear hierarchy, chips, FAB, empty state, contrast, no clutter.

10. Conclusion

The Yaluway Figma prototype is a complete, clickable UI for Topic 8. It turns a fragmented social-media problem into one neighbourhood notice board. Colour follows 60-30-10, screens share one component system, and the flow is ready to implement in Kotlin with Room. The next SDLC stage is development: the same screens become XML/Compose layouts, with posts stored locally and regular GitHub commits.

Appendix A — Screen inventory

#	Frame name	Purpose
1	Splash	Brand entry
2	Login	Returning user authentication
3	Register	New account + area
4	onboarding-help	Explain Help module
5	onboarding-services	Explain Services module
6	onboarding-marketplace	Explain Marketplace module
7	Home	Dashboard / mixed feed
8	help-board	Community requests
9	Services	Local service categories
10	Marketplace	Goods grid Sell/Donate/Borrow
11	post-detail	Single listing
12	create-post	Publish a listing
13	empty-state	No posts yet
14	my-posts	User's own listings
15	Profile	Account, trust, settings

Appendix B — Figma file

File name: Untitled (recommend renaming to Yaluway UI Prototype before submit).
